PROFESSIONAL SUMMARY

Dynamic and results-driven Full Stack Developer with extensive freelance experience building high-performance, responsive web applications. Proven expertise in crafting clean, intuitive user interfaces utilizing modern frontend frameworks alongside scalable cloud architectures and robust database backends. Adept at turning complex requirements into functional, optimized, and user-centric digital products.

TECHNICAL SKILLS

Frontend Tech: React, JavaScript (ES6+), Tailwind CSS, HTML5, CSS3, Responsive UI Design

Backend & Database: Supabase, PostgreSQL, RESTful APIs, Backend Failover Architectures

Tools & Workflows: Git, GitHub, Netlify, Freelance Client Management, Agile Development

PROFESSIONAL EXPERIENCE

Freelance Full Stack Developer

2024 – Present

Fiverr & Remote Contracts

- Design, develop, and deploy production-ready full-stack web applications for global clients, ensuring cross-browser compatibility and optimized mobile responsiveness.
- Architect clean, modular user interfaces leveraging React and utility-first frameworks like Tailwind CSS to deliver rapid, polished aesthetic experiences.
- Integrate serverless database ecosystems and authentication mechanics natively through Supabase, maintaining high data integrity and efficient query performance.
- Provide comprehensive deployment management across platforms such as Netlify, verifying continuous integration pipelines and minimizing operational downtime.

KEY PROJECTS

Hash Messenger

hash-messenger.netlify.app

Modern Real-Time Messaging Application

- Built a comprehensive, highly responsive real-time chat application utilizing React and Tailwind CSS, featuring collapsible multi-panel sidebars optimized for mobile viewports.
- Engineered instant message syncing and persistent message storage workflows by coupling the frontend with a relational database layer via Supabase.
- Designed a secure, multi-step registration wizard and user authorization flow ensuring protected channel access and user data privacy.

MySpace

myspacely.netlify.app

Secure Cloud Storage Solution

- Developed a high-performance cloud storage web dashboard allowing seamless user asset uploads, listing, and storage structure configuration.
- Implemented clean visual text formatting to process raw markdown and rich metadata, generating visually distinct, parsed information panels natively within the app.
- Maintained direct API integrations, minimizing reliance on external third-party middleware to run end-to-end data pipelines entirely inside the platform architecture.

EDUCATION

Bachelor of Science (B.Sc.) in Chemistry

2021 – 2025

University of Ilorin
